

Comprehensive Testing to Ensure Proper Functionality and Performance

Rarely does the testing and acceptance phase of a large IPT deployment get the attention it deserves. Testing of the features and proper functionality of every phone in the network has been too expensive, resource intensive and time consuming - ***until now!***

VITAL's IPT System Certification service offers a reliable and cost effective solution to test, validate and certify that 100% of your Cisco IPT environment meets actual user functionality requirements at the time of deployment. This turnkey solution, powered by ClarusIPC[®], will give you peace of mind by minimizing the risks typically associated with migrating to a converged environment.

People, Processes & Systems

Begin benefiting from a well-defined and executed testing and acceptance program.

VITAL's IPT engineers will work with you to define testing plans that will effectively test every aspect of your IPT environment. Once the system has been deployed, VITAL's engineers will utilize ClarusIPC[®], the only testing tool endorsed by Cisco in its best practices guide, "Steps to Success," to execute the test plans and validate that your entire Cisco IPT environment is functioning as intended. In many cases, configuration errors and oversights are identified allowing them to be resolved before the deployment goes live - preventing costly return visits and downtime. Once completed, VITAL will provide you with certification documentation which presents the test results and all of the data collected in a clear, useful format.

Experience the Benefits

- ▶ Rapid Problem Identification with Proactive Third-Party Verification
- ▶ Increased Customer Confidence and Satisfaction
- ▶ Improved Availability
- ▶ Reduced Testing Time & Costs
- ▶ Accelerated Return on Investment
- ▶ Faster, More Accurate IPT Deployments

Features

- Professional development of required test plans
- End-to-end IPT functionality and performance testing
 - Phone configuration
 - On and off-network calling
 - Conference bridges
 - Call Routing
 - And, more...
- Deployment configuration verification documentation
- Third party deployment certification
